

GEORG HAUZENBERGER

Swiss-Air Rescue Rega, Switzerland

I AM SPEAKING AT:

**2021 | IPMA GLOBAL
BEST PRACTICE WEEK**
ONLINE EVENT

April 27th | 9:00 am CEST / UTC+2

Speaker's bio:

Throughout Georg's career, he has been working in quite diverse fields, such as wireless telemetry, satellite communications, software architecture, cost steering and, ultimately, project management. Somehow, he ended up at Swiss Air-Rescue Rega, a private, non-profit air rescue service. Not that he would regret it. At Rega, Georg is responsible for managing IT services related to helicopter rescue operations and, on top, ground-based mountain rescue. Having experienced the power (and fun) of agile collaboration first-hand, he is also supporting Rega's agile transformation. Georg is currently working towards a digital transformation of rescue operations that ranges from the patients themselves to the helicopter and ground crews.

Abstract:

When a person in distress suffers from a critical illness or injury, every second can decide about life and death. This is when Swiss Air-Rescue Rega's helicopter crews step in and make sure that professional, round-the-clock medical assistance is delivered fast and under, virtually, all weather conditions.

Operating under such challenging conditions requires resilience on many levels. In this case study presentation, I'll show you examples of typical Rega helicopter rescue missions and will give you a look behind the scenes. I'll also outline the role of IT as a driving force for innovation and continuous improvement.
